*This transfer guide is a sample curriculum. Additional courses may be required based on placement test scores. Please work with your faculty advisor or success coach prior to course registration.

About Grantham's Program:

Grantham's Standard Option is perfect for nurses juggling work with studies, who want to build upon their associate degree and expand their skills in general nursing.

The program is evidence-based and developed according to best practices using the following professional standards: Quality and Safety in Education for Nursing Competencies and The Essentials of Baccalaureate Education for Professional Nursing Practice (AACN).

This undergraduate program incorporates both didactic and practice experience into the curriculum. The practice experiences use both direct human interface and indirect learning situations that allow the student to apply concepts in the course to clinical situations. All students are required to complete a capstone project in a clinical setting. Graduates are prepared to function as nurse generalists in a variety of healthcare settings.

About JJC's Program:

JJC's RN program combines traditional classroom experiences, in-class high-fidelity simulations, and online courses with clinical experiences in local health facilities. A student who completes the program is awarded an Associate in Applied Science degree and is eligible to write the National Council Licensure Examination for Registered Nurses (N.C.L.E.X.) for registration as an R.N. in Illinois.

The nursing program combines classroom, laboratory and clinical learning opportunities for students. The nursing program is very rigorous. Classroom and clinical time is approximately 18 hours per week with an additional 20 hours or more for preparation and studying.
